

## Research Study (ADX48621-301)

<b>What</b>	The purpose of this study is to evaluate the effectiveness and safety of a new medication called dipraglurant (ADX48621) in Parkinson's disease patients with dyskinesia (involuntary twisting movements associated with levodopa treatment).
<b>Who</b>	Approximately 140 subjects are needed for this study.
<b>Length</b>	Your participation will last for approximately 12 weeks and involve 8 study visits. At these visits, you will be asked to take the study drug, provide blood and urine samples, complete questionnaires, and answer questions about your symptoms.
<b>Key Study Requirements</b>	<ul style="list-style-type: none"><li>• English speaking</li><li>• Age 30 to 85 years of age</li><li>• Have been diagnosed with Parkinson's disease and are experiencing dyskinesia symptoms that interfere with your daily activities</li><li>• Ability to walk (with or without a walker) while on your current medication regimen and complete the study</li><li>• Be on a stable regimen of Parkinson's medications for at least 6 months prior to study entry, including a levodopa medication administered not less than 12 hours apart. You must be willing to continue the same regimen during study.</li></ul> Other eligibility criteria apply. Please contact the study coordinator for more information on how to order to participate in the study.
<b>Extension Study Opportunity</b>	Following completion of the study, you may have the option to participate in an extension study where you will receive dipraglurant.
<b>Compensation</b>	You may be reimbursed for travel and other expenses.
<b>Sign up</b>	Please call or email [Beth (772)492-7051 X 232]

Do you or someone you know have Parkinson's disease with dyskinesia (involuntary twisting,

turning movements) and are interested in participating in research?
